

Agile Methodology – Step by Step

Simple Hinglish Explanation

Made with GAMMA

What is Agile Methodology?

Agile ek software development ka approach hai jo **flexibility, fast delivery,** aur **customer feedback** pe focus karta hai.

Traditional methods mein sab kuch pehle se plan karte the, lekin Agile mein hum small pieces mein kaam karte hain aur har sprint ke baad improvement karte hain.

Isse teams quickly respond kar sakte hain jab requirements change ho jaayein.

Made with GAMMA

Why Agile is Used?

Traditional Problems

Long planning, rigid structure, difficult to change requirements mid-way

Fast Delivery

Working features har 1-2 weeks mein deliver ho jaate hain

Flexibility

Requirements change kar sakte hain, customer feedback ko accept karte hain

Better Quality

Continuous testing aur improvement se quality badhti hai

Agile Core Principles

01

Customer Satisfaction

Early aur continuous delivery se customer happy rahega

02

Working Software

Functional software har sprint mein deliver hota hai

03

Continuous Improvement

Har sprint ke baad team apne process ko improve karti hai

04

Team Collaboration

Daily meetings se sabko pata rahta hai project ka status

Made with GAMMA

Agile Team Roles

Product Owner

Customer requirements ko samajhta hai aur priority decide karta hai

Scrum Master

Team ko help karta hai Agile rules follow karne mein aur obstacles remove karta hai

Development Team

Developers, testers jo sprint goals ko achieve karte hain

Product Backlog & Sprint

Product Backlog

Ye ek **feature list** hai jisme sab features priority ke according arranged hote hain.

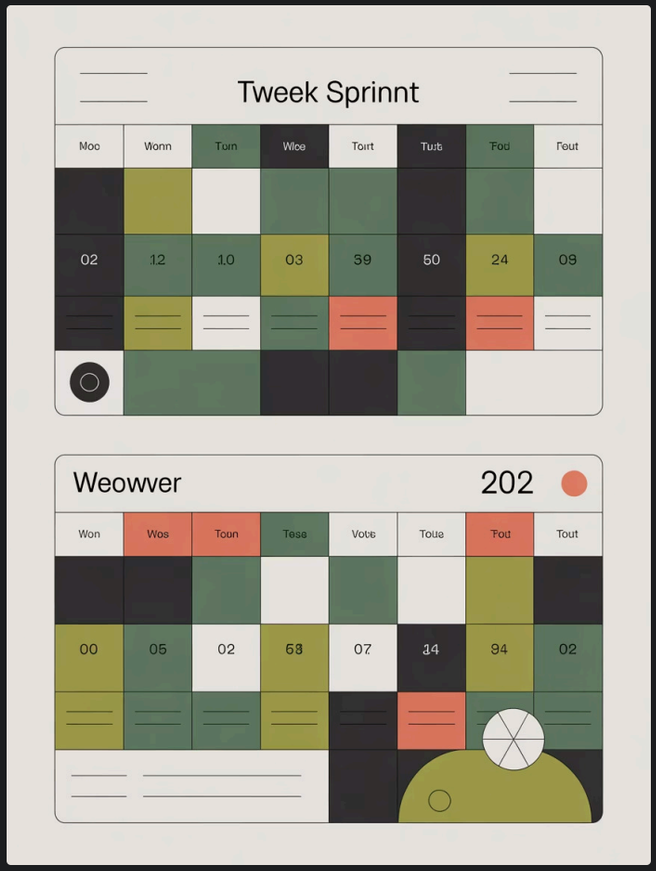

Example: Food delivery app ke features - user login, restaurant search, cart, payment, tracking

Sprint

Short period (1-2 weeks) jisme team specific features pe kaam karti hai.

Sprint goal: Kuch working features complete karna

Made with GAMMA

Sprint Planning & Execution

Sprint Planning

Product Owner backlog se features select karta hai aur team sprint backlog banati hai

Sprint Execution

Team development aur testing karta hai aur working increment create karta hai

Made with GAMMA

Daily Stand-up Meeting

15-Minute Meeting

Har team member ye 3 questions answer karta hai:

- **Yesterday kya kiya?**

  Yesterday kya work complete kiya

- **Today kya karenge?**

  Today ka plan kya hai

- **Problems toh nahi?**

  Koi obstacles ya blockages hain kya

Made with GAMMA

Sprint Review & Retrospective

Sprint Review

Team kaam dikhata hai client ko aur **feedback** collect karta hai

Client new requirements ya changes bata sakta hai

Sprint Retrospective

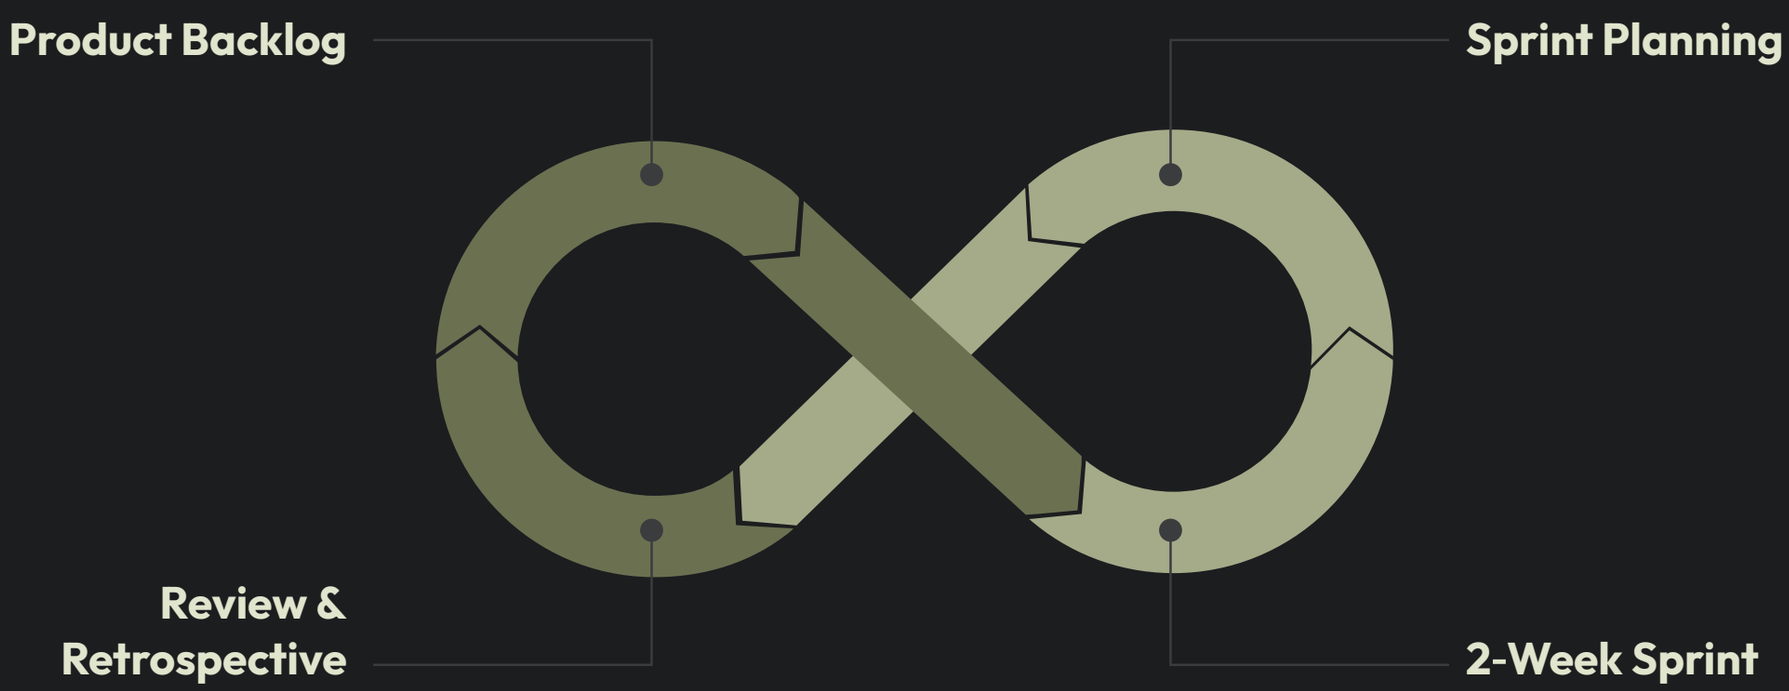

Team internally discuss karta hai:

- Kya accha hua? (What went well)
- Kya improve kar sakte hain? (What to improve)
- Next sprint kaise better karenge?

Made with GAMMA

Real Example: Food Delivery App

Sprint 1

User login aur restaurant search

Sprint 2

Cart aur payment integration

Sprint 3

Order tracking aur notifications

> **Agile = Flexible + Fast + Customer-Focused**
>
> IT industry mein Agile isliye important hai kyunki requirements fast change hote hain aur teams quickly respond kar sakte hain
